

# BESIII Oxford Group Meeting

Martin Tat

Oxford LHCb

25th March 2021

- Double tagged  $D \rightarrow K^+ K^- \pi^+ \pi^-$  events
- Previously: Fit  $\Delta E$  in double tagged events
  - Fixed to single tagged events, much better fit!
- Fit to  $m_{\text{BC}}$  of single tags to get ST yield
- Got TopoAna and MC truth matching working  $\Rightarrow$  to study backgrounds

# Double tag $\Delta E$ fit

(a)  $\Delta E$ ,  $KK$

(b)  $\Delta E$ ,  $\pi\pi$

(c)  $\Delta E$ ,  $K\pi$

(d)  $\Delta E$ ,  $K\pi\pi^0$

# Double tag $\Delta E$ fit

(a)  $\Delta E, \pi^+\pi^-\pi^0$

(b)  $\Delta E, K_S^0\pi^0$

(c)  $\Delta E, K_S^0\pi^+\pi^0$

(d)  $\Delta E, K_S^0\eta$

# Double tag $\Delta E$ fit

(a)  $\Delta E, K_S \eta'(\pi\pi\eta)$

(b)  $\Delta E, K_S \eta'(\pi\pi\gamma)$

(c)  $\Delta E, K\pi\pi\pi^0$

# Double tag $\Delta E$ fit

(a)  $\Delta E$ ,  $K_S KK$

(b)  $\Delta E$ ,  $K_S \pi \pi$

(c)  $\Delta E$ ,  $KK \pi \pi$

# Single tag $m_{BC}$ fit

(a)  $m_{BC}$ ,  $KK\pi\pi$

(b)  $m_{BC}$ ,  $K_S\pi^0\pi^0$

Question: MC samples for signal shape?

- MC truth matching: Check for mis-ID and combinatorial
- TopoAna: Check peaking backgrounds
  - Had to remove intermediate resonances from decay tree

# Combinatorial background

**(a)** With combinatorial background

**(b)** Without combinatorial background

## Example: $\pi\pi$ single tag

Question: How to fit this?

# Example: $\pi\pi$ single tag
